- **Application development and systems integration**

By designing, building and managing all aspects of your IT transformation to meet the demand for e-business.

- **Application management services**

Our services help you manage your application portfolio to achieve maximum business value.

- **Applications on Demand**

Pay-as-you-go infrastructure and application management services for SAP, Oracle, PeopleSoft, Siebel, Ariba, and E.piphany.

- **Business continuity and recovery**

Keep your business running - whatever the conditions.

- **Customized training solutions**

We offer a comprehensive portfolio of all technical training and education services to help you acquire and optimize your IT skills.

- **Telephony Consulting and Design**

VoIP Design, Installation and Support for Cisco, Avaya, 3COM, & Nortel products.

- **Infrastructure and systems management**

Byte will plan, deploy, optimize and manage your complex, multi-vendor IT infrastructure.

- **IT performance**

We offer a variety of services designed to test and improve the performance of your business infrastructure.

- **Maintenance**

Byte will provide single-source services designed to help you keep your multi-vendor environment operating at peak performance.

- **Networking**

Our services can help you plan, deploy, optimize, manage and run your network infrastructure.

- **Network Outsourcing / Hosting**

Strategically partner with Byte to manage and operate your information technology systems. This service includes meeting client data and voice/video network requirements. In addition, Byte will design, install and provide on-going technical support. We eliminate the need for hiring specialized IT personnel. Lastly, we provide install, move, add and change (IMAC) services.

- **Packaged application implementation**

We can manage and support your packaged applications from independent software vendors.

- **Security and privacy**

Byte will design and deliver the security architecture and infrastructure needed for trusted electronic relationships.

- **Service-oriented architecture**

With a service-oriented architecture you can build applications and integrate them across your organization.

- **Storage**

Byte will assist with the planning, installation, optimization, migration and testing for your storage requirements.

- **Technical support**

Keeping your systems up and running is a necessity and Byte technical support services can help.

- **Wireless**

Our services focus on horizontal infrastructure, workforce mobility solutions and industry vertical solutions.
